

SUMMARY:

Multi-talented and hard-working father who has not only driven over half a million safe miles with various heavy haul equipment but also pursued coding education and completed several full-stack software development projects utilizing Visual Studio, Unreal Engine, Unity, MongoDB, Google VM, and Postman. Proficient in HTML, CSS, JavaScript, React.js, Node.js, Typescript, Express, MongoDB, C++/Blueprint, and C#.

PROFESSIONAL RESPONSIBILITIES:

Perform thorough pre- and post-trip inspections, report and coordinate repairs, and maintain truck and trailer cleanliness. Verify load paperwork, secure freight, and route efficiently while adjusting to road conditions with ongoing safety checks. Manage loading, unloading, yard moves, and accurate delivery documentation. Communicate issues effectively, ensure resolutions, and provide excellent customer service. Also assisted in training new CDL drivers. Equipment types include 4-axle and 53' maxi flat-bed trailer combo; 53' reefer; 28' and 30' van with lift; 32', 48' and 53' van; 48' curtain; and 48' flat-bed. Previous roles included supervision, delegation, cooking, stocking, inventory, cashiering, dish-washing, construction, landscaping, and sprinkler installation. These experiences reflect a strong work ethic, adaptability, and commitment to safety and efficiency across diverse roles.

TECHNICAL EXPERIENCE:

TripleTen offered a 10-month Full-Stack Software Engineering bootcamp. I completed the program in five and a half months. During that time, there were several projects as part of the curriculum. All these projects are on Github. Live versions requiring servers are unavailable at this time. The following are the two note-worthy projects from this experience:

PLANET PLEDGE – Frontend Backend Demo	NEWS EXPLORER – Frontend Backend Demo
- This was a team challenge and competition that was to be completed within a week; our team won. - This website encourages users to commit to planet-saving measures, provides a quiz to check their current actions, and provides access to a few external supportive resources that help additional actions. - Users can post “pledges” that can be seen by other users. The quiz requires certain validation prior to allowing submission. Resources have links that open in a separate window. Website scales to device size. - Backend has request restrictions, CORS protections, Schema parameters and limitations, error handling with specified definitions, and JWT secret key requirements	- This website asks the user for their location, gives them the current weather and a 6-day forecast, provides current stock information for popular companies, and allows uses to search for articles. - Users can register an account and login, favorite and like articles (where “favoriting” saves it to their account and “liking” adds to a server-wide list that updates the like count), and can update their name and avatar. - The interface adapts based on the user's screen size, forms have built-in validation, server has responses regarding authorization and conflicts, and back-up information is provided for each variable. - Backend has restrictions, protections, authentication, validation, and several other features.

EMPLOYMENT HISORY:

IEDS	CDL Driver	June 2 nd , 2025 to Present	509-922-0944
Coeur d'Alene Window	CDL Driver	July 9 th , 2019 to January 17 th , 2025	509-340-0705
McDonalds	Opening Manager	December, 2014 to June, 2015	208-664-5559
Staples	Customer Service	August, 2012 to December, 2014	208-667-8604
Super 1 Foods	Courtesy Clerk	June, 2006 to January, 2008	208-772-5722

EDUCATION:

TripleTen	Full-Stack Software Engineer	October 1 st , 2024 to March 12 th , 2025
Lewis-Clark State College	Bachelors in Communication Arts, B.A. & B.S. Bachelors in Management, B.S.	May, 2009 to May, 2013
North Idaho College	A.A. In General Studies	August, 2006 to May, 2009
